Experience

Backend Developer Intern, iSoftStone - Developed high-throughput backend services in Go and Beego for an enterprise server lifecycle management platform, sustaining 1,500+ configuration and validation requests per second in load testing across core infrastructure workflows. - Implemented a server configuration compatibility service covering 24 hardware, OS, and deployment rules by extending the MySQL schema, developing backend validation logic, optimizing SQL queries, and exposing REST APIs for frontend integration. - Optimized validation logic and database access paths, reducing P95 API latency by 31% (420 ms → 290 ms) and average MySQL query latency by 34% (160 ms → 105 ms). - Developed a reusable skill for an AI coding agent, defining task instructions, analysis rules, and automated workflows to analyze 400K+ lines of Go code across 1,200+ source files and identify 700+ naming inconsistencies.	01/2026 – 05/2026 Xi'an, China
Software Engineering Intern, Microsoft AI Project - Integrated the GPT-4o API into a C# financial-analysis application, combining market data and news from the MSN Finance API to generate automated AI-powered stock reports. - Built an end-to-end data-to-LLM pipeline processing 15+ market indicators and news signals per request, reducing report preparation time from 10–12 minutes to under 1 minute. - Designed and evaluated 6 prompt templates across 120+ generated reports, improving structured-output success rate from 84% to 95%.	04/2025 – 05/2025 Remote (Beijing, China)

Projects

Reddit Distributed Data Processing Pipeline - Built a distributed data-processing pipeline with Apache Spark to clean, transform, and engineer features from 5M+ Reddit posts and comments for large-scale machine-learning workloads. - Designed scalable Spark preprocessing workflows for text normalization, filtering, aggregation, and feature generation, enabling efficient distributed processing of multi-million-record datasets.	05/2025 – 08/2025
--	-------------------

Skills

Languages Go, Java, Python, C#, SQL, Kotlin, JavaScript	Frameworks Apache Spark, Beego, Spring Boot, REST APIs
Databases MySQL, SQLite, Cloud Firestore	Tools Linux, Docker, Git

Education

Master of Engineering in Electrical and Computer Engineering, <i>University of Toronto</i>	09/2026 – 12/2027 Toronto, ON
Bachelor of Science in Computing Science, <i>Simon Fraser University</i>	09/2022 – 12/2025 Burnaby, BC
